

LoadDesigner optimizes SCHENKER loading processes

The eight Schenker branches in The Netherlands form part of one of the leading international service providers in the field of integrated logistics services, the Schenker Group. Schenker provides road, air and sea freight services to trade and industry worldwide, as well as all related logistics services. Employing 38,000 staff members at 1,100 locations, Schenker generates an annual turnover of €6.8 billion worldwide.

Schenker: **‘In recent years Schenker International BV has clearly discovered that LoadDesigner pays for itself’**

- international logistics service provider
- 38,000 employees
- 1,100 locations

Schenker in Rotterdam

Schenker Rotterdam has been using LoadDesigner since 1998 to optimize sea freight container loading. The major benefits gained by using LoadDesigner are the time savings that can be achieved thanks to its fast container loading calculation and load list generation functions. These lists are very useful during the physical loading process. LoadDesigner also provides support during acquisition activities. Thanks to its fast load simulation feature and options for printing containers, Schenker can provide competitive sea freight quotations.

Schenker in Venlo

Schenker Venlo is specialized in the transportation of electronics. LoadDesigner has been used for the shipping of these delicate items since 2001. It is possible to palletize items beforehand, taking into account the various pallet dimensions. Schenker uses the stacking matrix for this purpose. This module can be used to specify constraints applicable to stacking at both item level and product group level. LoadDesigner displays loading lists as well as three-dimensional images for the transportation units requiring loading.

It is evident that the LoadDesigner system can be implemented across a variety of applications. Although operating processes vary greatly at these two Schenker sites, LoadDesigner provides excellent optimization in both cases.

Fast Calculations

Arnold van Rijs, Manager at Schenker Rotterdam, ‘In recent years Schenker International BV has clearly discovered that LoadDesigner pays for itself. Using this system, employees can quickly perform calculations that would otherwise take several hours.’

LoadDesigner Advantages

- improved transportation loading levels
- increased service level
- planning time reduced to a minimum
- loading process transparency
- overview of required means of transportation and loading levels
- accurate planning, reduced human error
- reduced transportation damage due to better loading

Additional Information

If you are interested in receiving more information, do not hesitate to contact us to make a no-obligation appointment. An ORTEC expert will gladly demonstrate the countless possibilities that LoadDesigner and our other products and services can provide.
